Dear Sir/Madam,

we are pleased to present to you the latest edition of Polgast product catalogue.

Our offer includes a wide range of stainless steel furniture and equipment essential for outfitting a professional kitchen. The durable, resilient material and welded construction technology ensure that you receive a functional product that will serve you successfully for many years.

Most of the catalogue items can be ordered in custom dimensions or tailored to meet specific preferences in terms of finishing and sizing.

We place great emphasis on safety and health protection. Our products meet the EU requirements for products intended to come into contact with food. Additionally, we hold health quality certificates from the National Institute of Hygiene for most of our furniture, and we certify the rest.

**Reasons to choose Polgast:**

- wide product range
- tailor-made furniture
- excellent quality-to-price ratio
- short lead time
- dedicated and competent team
- modern production technologies
- professional customer service
- direct and close contact with customers through regional sales representatives
- socially responsible business practices

We look forward to doing business with you!

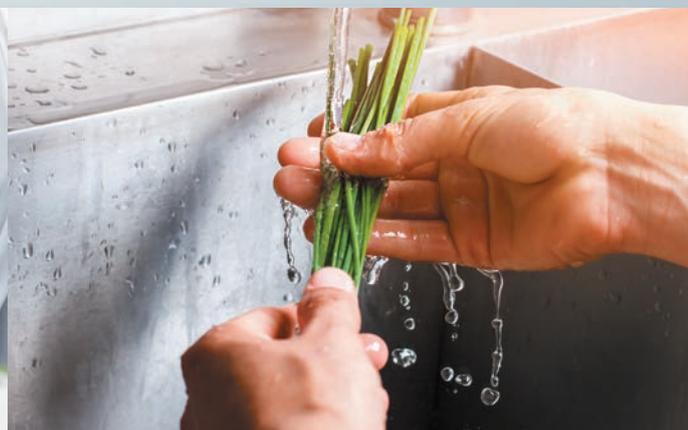

Management Board of Polgast Sp. z o.o.

We work with  
high-quality modern  
production facilities

The whole manufacturing process, from cutting sheet metal and profile sections, through punching, cutting out and then moulding and fabricating, and the final finish is carried out using top quality machinery produced by renowned international manufacturers, and operated by a qualified and experienced team. The modernity of our equipment ensures unparalleled quality and precision in the production of our goods, setting new standards in the industry.

# Maintenance and cleaning instructions for furniture made from steel with enhanced corrosion resistance (the so-called stainless steel) and recommendations regarding use.

Stainless steel is widely used in gastronomy furniture production. Its smooth surface prevents pathogenic microflora growth, which helps maintain a high level of hygiene in food processing in private and professional kitchens.

Stainlessness of steel with enhanced corrosion resistance is a result of the composition of the alloy itself as well as of the chemical reaction taking place on stainless steel surfaces, i.e. the formation of a passive layer of chromium oxide. The process takes place only on clean surfaces with direct access to atmospheric oxygen.

As any other material, stainless steel requires proper use and care. Regular cleaning and maintenance of stainless steel furniture allows for its long-term and trouble-free use.

- 1. The furniture surfaces should be kept clean. Any dirt should be removed on a current basis. Dirt and deposits remaining on the furniture surface may cause discolouring and corrosion.**
- 2. The furniture should be cleaned using only cleaning agents intended for stainless steel. In most cases the cleaning procedure consists in applying the agent on the furniture surface, removing the dirt with a cloth or a sponge, and then rinsing with clean water and wiping all the surfaces dry, including any hardly accessible places where dirt and moisture may accumulate.**
- 3. After cleaning, the stainless steel furniture should be preserved with products intended for stainless steel maintenance.**
- 4. Do not use abrasive powder or cream cleaners, silver cleaning agents, bleach or any other agents containing chlorine.**
- 5. Stainless steel surfaces that are used or cleaned incorrectly are prone to discolouring and tarnishing and, in the long run, to corrosion.**
- 6. There is a wide range of professional cleaning agents available on the market that is intended for the cleaning and maintenance of stainless steel furniture. Please use only products of renowned brands and follow the instructions provided by their producers.**

Stainless steel may be damaged as a result of coming into contact with organic and inorganic acids and bases, e.g. derivatives of table salt, vinegar extracts, mustard, seasoning mixes and concentrates, etc. Therefore, it is advised not to leave any remains of foods or seasonings on the furniture surface for an extended period of time.

Other factors affecting stainless steel include coming into contact with other non-ferrous and ferrous metals, e.g. knife blades or metal scourers. Please do not cut directly on the furniture surface and avoid other operations involving kitchen metal appliances, which could damage the passive layer of the furniture.

Stainless steel furniture surfaces may also get discoloured as a result of coming into contact with any ingredients that have intensive colouring properties, such as blood or seasonings. This kind of discolouring is not a damage of the steel surface, but a result of normal use. In the course of further regular cleaning and maintenance of the furniture, the discolourations will be gradually fading away.

Inorganic compounds found in hard or ferrous tap water may form a deposit on the stainless steel surfaces. Leaving the furniture without wiping them dry leads to evaporation of the water and precipitation of deposits which may have a rusty colour. Such discolourations are not signs of steel corrosion, but merely sediments on the surface. Sediments of this kind should be promptly removed as described above.

The manufacturer and the distributor of the stainless steel furniture shall not be liable for any damage to the furniture as a result of use, cleaning or maintenance contrary to the instructions above, or for any discolourations and sediments resulting from normal use.

### Stainless steel foot for 40x40 mm profile

Height adjustment 37-65 mm  
Load capacity for 3 pcs approx. 400 kg  
price € 20,-

## Taps

### Tap with shower

- Shower resistant to high-pressure water stream
- Single-hole tap, rotary spout
- Plastic shield
- Wall-mounted handle that can be shortened
- Required table opening: 32.5 mm
- Connector hoses: 3/8", length: 400 mm
- Tap height: 1060 mm

code	price €
BAT-279	789,-

### Tap with pull out rinser

- Single-hole pillar tap.
- Rinser resistant to high pressure water flow.
- Plastic rinser casing.
- Adjustable column support.
- Wall mount (optional shortening).
- Connection hoses: 1/2".
- Table hole required: Ø 30 mm.
- Spout reach 280 mm.

code	price €
BAT-515	612,-

### Single pedestal pre-rinser

- Single pedestal pillar tap.
- Rinser resistant to high pressure water flow.
- Maximum water flow: 17 L/min.
- at a pressure of 4 bar.
- Plastic rinser handle.
- Adjustable column support.
- Wall mount (optional shortening).
- Connection hoses: 1/2", 400 mm long each.
- Table hole required: Ø 27 mm.

code	price €
BAT-300	436,-

## Additional sinks

Wide range of additional sinks. Drain hole ø50 mm.  
Installation service of an additional sink bowl  
(the price of the sink bowl is not included): 76 €.

mm	price €
600x500x300	495,-

# TABLES WITH SINK

- furniture made of high-quality stainless steel, framework and cabinet bodies made of AISI 430
- worktops made of AISI 304
- tables with sinks fitted with a top of which the surface is lowered in relation to the rim
- front side of cabinets covered with a grille
- all structure welded
- feet adjustable in the range +25/-5 mm
- in pools a slope towards the siphon, so called envelope
- possibility to cut a hole for a colloidal mill

- furniture can be made entirely from AISI 304 steel - surcharge of 10%
- approximate permissible load of table tops and shelves is 70 kg/m<sup>2</sup> - if higher loads are anticipated, please contact us for structural changes

innovative magnetic closure

6 legs ensuring stability and safety at work

## Wall mounted wash basin

## Reinforced table with sink without shelf

- worktop made of AISI 304
- tap hole Ø 35 mm
- standard sink bowl dimensions 400x400x(H)250 mm
- in furniture of size B=700 mm possibility of installing larger sink bowl
- sink bowls in other dimensions optional (see page 12-13)
- possibility to cut a hole for a colloidal mill - net price € 54

# AUXILIARY EQUIPMENT

## Professional grease separator

Its purpose is to separate the organic oils from the waste water; it is intended for fitting with sinks, troughs and dishwashers. It is manufactured from **AISI 304** stainless steel and meets all the requirements of the professional catering business. It is equipped with an integrated grease and organic waste tank, inflow and outflow devices with a diameter of 50 mm and drain ball valve 1/2 inch.

The sealed cover features stainless steel locking clips.

The grease separator is available in two versions: 30 l, 60 l, 180 l.

# EXTRACTOR HOODS

# Extractor hoods

## Intended use:

Extractor hoods are designed to capture and remove heat, steam and contaminants (mainly grease particles) generated in the process of cooking, frying and baking in a professional kitchen without additional fresh air supply. The exhaust air flows through the filters (labyrinth filters). Grease particles and contaminants settle on the labyrinth filters and are carried off to the collection channel of the extractor hood. An outlet at the collection channel allows the discharge of grease and contaminants.

## Models:

- box
- angled
- trapezoid

## Each hood model is available in two options:

- wall mounted
- central

## Execution:

- The hoods are manufactured from top grade stainless steel.
- Extractor hoods size A>2600 mm are made as a joint unit (fixed with screws) with two or more middle modules.
- The hoods are provided with a system of holes and hanging fixtures for mounting.

- Spigots are a standard equipment of the hood. When placing an order, specify the type, size and number of spigots. Spigot arrangement according to our design standard - see page 191-193.
- Labyrinth filters, duct connectors and lighting are available as additional accessories.
- The hoods are not equipped with fans.
- The hood should be connected to a fan or a ventilation system in the building.

## Additional accessories for extractor hoods:

- **labyrinth filters:** reusable, washable in all types of dishwashers, extra cost, see catalogue p. 189
- **hood lighting:** fluorescent lamps with IP65 protection rating or LED, extra cost, see catalogue p. 190
- **AISI 304:** extra cost of 15%

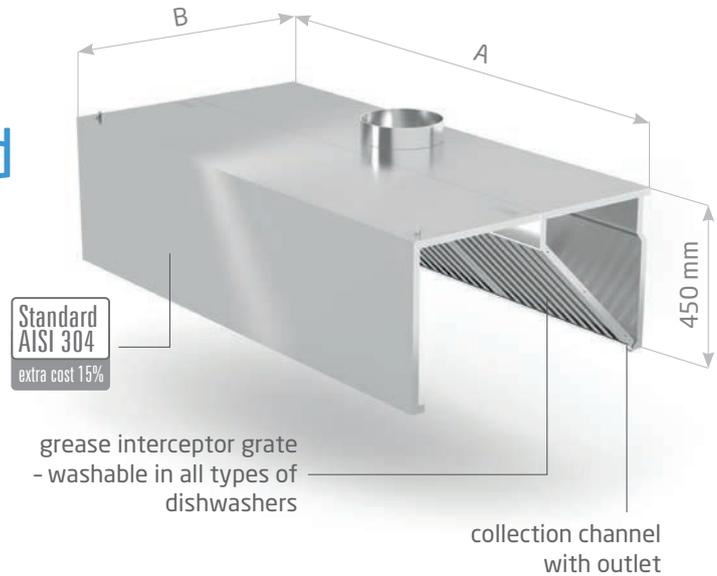

## How to maintain extractor hoods?

- clean labyrinth filters on a regular basis
- labyrinth filters should be properly mounted to allow the condensate to flow into the hood
- systematically empty the collection channel from the condensate, preferably every few days
- for cleaning and maintenance of stainless steel furniture, see catalogue page 7

# Wall mounted box extractor hood

**Note!** Prices of hoods do not include extra accessories, i.e. labyrinth filters, lighting and duct connectors - see p. 189-190.

Spigots are standard equipment in the hood - see page 190. When placing an order, specify the type, size and number of spigots.

# Extraction and air input hoods

## Intended use:

Extraction and air input hoods are designed to be used in closed rooms with central ventilation systems. They capture and remove heat, steam and contaminants (mainly grease particles), while providing an adequate balance of supply and exhaust air. The exhaust air flows through the filters (labyrinth filters). Grease particles and contaminants settle on the labyrinth filters and are carried off to the collection channel. An outlet at the collection channel allows the discharge of grease and contaminants.

## Models:

- **I** - induction model - fresh air is blown on labyrinth filters
- **K** - compensating model - fresh air is blown into the kitchen through the perforated front wall of the hood
- **KI** - compensating induction model - fresh air is blown on labyrinth filters and into the kitchen

## Each hood model is available in two options:

- wall mounted
- central

## Execution:

- The hoods are manufactured from top grade stainless steel.
- Extraction and air input hoods sized A>2600 mm are made as a joint unit (fitted together) with two or more end modules.

- Spigots are a standard equipment of the hood. When placing an order, specify the type, size and number of spigots. Spigot arrangement according to our design standard - see page 191-193.
- Labyrinth filters, duct connectors and lighting are available as additional accessories.
- The hoods are not equipped with fans.
- The hood should be connected to a fan or a ventilation system in the building.

## Additional accessories for extraction and air input hoods:

- **labyrinth filters:** reusable, washable in all types of dishwashers, extra cost, see catalogue p. 189
- **hood lighting:** fluorescent lamps with IP65 protection rating or LED, extra cost, see catalogue p. 190
- **AISI 304:** extra cost of **15%**

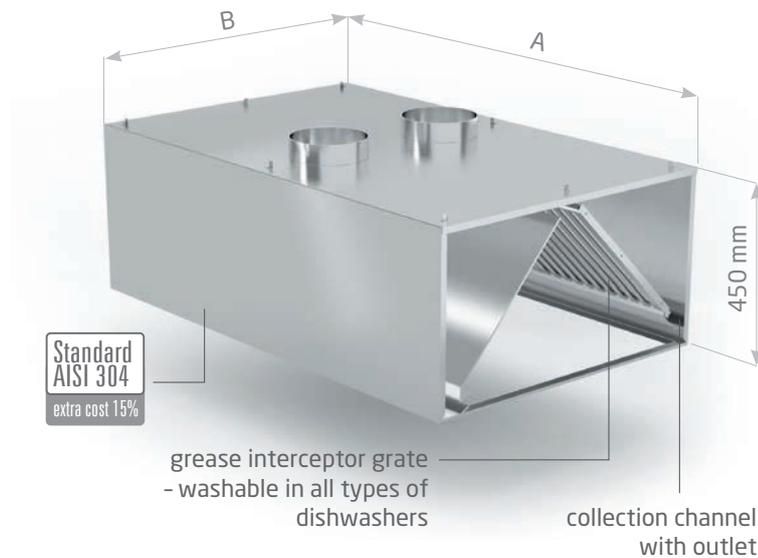

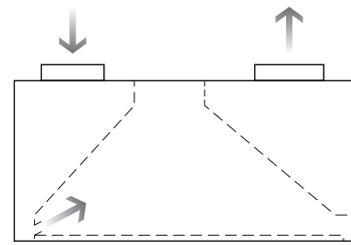

## How to maintain extractor hoods?

- clean labyrinth filters on a regular basis
- labyrinth filters should be properly mounted to allow the condensate to flow into the hood
- systematically empty the collection channel from the condensate, preferably every few days
- for cleaning and maintenance of stainless steel furniture, see catalogue page 7

# Wall mounted induction hood

**Note!** Prices of hoods do not include extra accessories, i.e. labyrinth filters, lighting and duct connectors - see p. 189-190.

Spigots are standard equipment in the hood - see page 190. When placing an order, specify the type, size and number of spigots.

2600	3 602,-	3 731,-	3 858,-	3 987,-

Extraction and air input hoods can be made with dimension A > 2600 mm. In such a case, the hood will be assembled from two or more smaller, non-though modules. The price of the hood will be the sum of the prices of the individual modules.

# Central compensatory hood

**Note!** Prices of hoods do not include extra accessories, i.e. labyrinth filters, lighting and duct connectors - see p. 189-190.

Spigots are standard equipment in the hood - see page 190. When placing an order, specify the type, size and number of spigots.

# Condensation hood

## Intended use:

A condensation hood captures and removes steam and heat from above any equipment that does not produce grease, such as dishwashers and boiling pans. The condensate accumulates in the hood collection channel, thus preventing the dripping of water. An outlet at the collection channel allows the discharge of the condensate.

## Execution:

- the hood is manufactured from top grade stainless steel
- the hood is provided with a system of holes and hanging fixtures for mounting
- the hood is not equipped with a fan

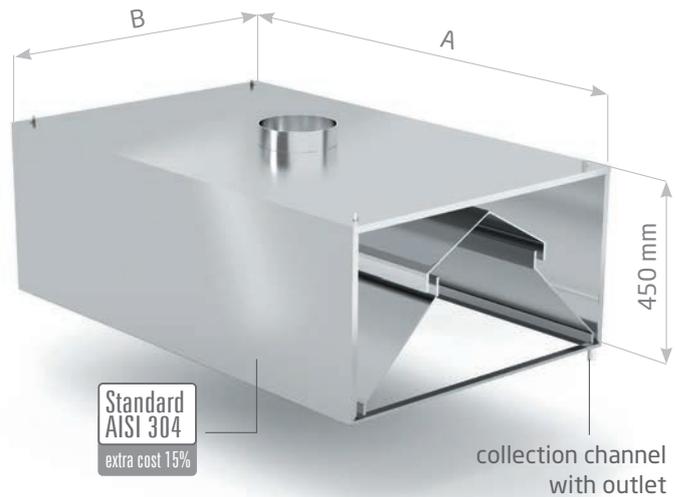

## Additional accessories for condensation hoods:

- **round or rectangular duct connectors** - upon placing the order, please specify the type, size and number of duct connectors, for arrangement according to our design standard, see page 191-193
- **AISI 304:** extra cost of 15%

## How to maintain condensation hoods?

- empty the collection channel from the condensate using a hose, directly to the sewage system
- for cleaning and maintenance of stainless steel furniture, see catalogue page 7

# Labyrinth filters for extractors

**Purpose:** Labyrinth filters are constructed in the form of a grate, which enables efficient collection of pollutants (mainly grease particles) generated during cooking, frying and baking in commercial kitchens.

**Method of operation:** The air stream flows through the labyrinth filters. Grease and dirt particles settle on the grate and are discharged into the collection channel of the extractor hood.

**Efficiency:** The amount of precipitated grease (%) in the evacuated air ranges between 78% and 82% depending on the speed of air flow.

**NOTE:** Labyrinth filters are REUSABLE - their dimensions of 500x500 and 300x500 mm allow cleaning in dishwashers.
